

# SOFTWARE REQUIREMENT SPECIFICATION (SRS)

**Name:** Afolayan boluwatife

**Course:** CSC426

**Date:** July 2026

## 1. Introduction

### 1.1 Purpose

This document specifies the software requirements for IRO (Issues Reporting Outlet), a web-based platform that allows AAUA students and indigenes of Akungba, Iwaro, Etioro, and Ayegunle to report and track community or campus-related issues.

### 1.2 Scope

IRO will allow community members (students and indigenes) to submit issue reports through a simple web form, view a list of previously reported issues, and allow an administrator to mark issues as resolved. The system is a lightweight mini-implementation intended to demonstrate the core reporting workflow.

### 1.3 Intended Audience

This document is intended for the course instructor (Dr. O. O. Ajayi), project evaluators, and future developers who may extend the system.

### 1.4 Definitions and Acronyms

- **IRO** – Issues Reporting Outlet
- **SRS** – Software Requirement Specification
- **Indigene** – A resident of Akungba, Iwaro, Etioro, or Ayegunle communities
- **Admin** – System administrator who manages reported issues

### 1.5 information gathering

I used a google form to collect information this is the link to the form

<https://forms.gle/ua7beSFXsmCppUsF8>

## 2. Overall Description

### 2.1 Product Perspective

IRO is a standalone web application built to address the lack of a formal, centralized channel for reporting issues affecting AAUA students and surrounding indigene communities. It replaces informal or non-existent reporting methods identified during problem analysis (see Ishikawa diagram, Appendix A).

### 2.2 User Classes and Characteristics

**Student** : A member of AAUA who reports campus-related issues (hostel, academic, security, etc.)

**Indigene** : A resident of the host communities who reports community-related issues (roads, water, electricity, security, etc.)

**Administrator** : Reviews submitted reports and updates their resolution status.

### 2.3 Operating Environment

The system runs on any modern web browser (Chrome, Firefox, Edge) on desktop or mobile devices, requiring no installation.

### 2.4 Design and Implementation Constraints

Built with plain HTML, CSS, and JavaScript for simplicity and fast deployment.

Data is stored client-side (browser local storage) for demo purposes, given the project's limited scope and submission timeline.

## 3. Functional Requirements

| ID  | Requirement          | Description                                                                                                                                     |
|-----|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| FR1 | Submit Issue Report  | The system shall allow a user to submit an issue by providing name, respondent type (student/indigene), community, issue type, and description. |
| FR2 | View Reported Issues | The system shall display a list of all submitted issues with their details and current status.                                                  |

|     |                               |                                                                                                                                                                      |
|-----|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR3 | Track Issue Status            | The system shall show whether an issue is "Open" or "Resolved".                                                                                                      |
| FR4 | Mark Issue as Resolved        | The system shall allow an administrator to change an issue's status from "Open" to "Resolved".                                                                       |
| FR5 | Categorize Issues             | The system shall allow users to select an issue type (Infrastructure, Security, Electricity, Water Supply, Academic/Campus, Health, Other) when submitting a report. |
| FR6 | Identify Respondent Community | The system shall record which community (Akungba, Iwaro, Etioro, Ayegunle, Other) the reporter belongs to.                                                           |

#### 4. Non-Functional Requirements

| ID   | Requirement     | Description                                                                                                              |
|------|-----------------|--------------------------------------------------------------------------------------------------------------------------|
| NFR1 | Usability       | The interface shall be simple and intuitive enough for users with basic digital literacy.                                |
| NFR2 | Performance     | Pages shall load in under 2 seconds under normal conditions.                                                             |
| NFR3 | Availability    | The system shall be accessible via any standard web browser without requiring installation.                              |
| NFR4 | Portability     | The application shall run correctly on both desktop and mobile screen sizes (responsive design).                         |
| NFR5 | Maintainability | The codebase shall be simple and modular (separate HTML, CSS, and JS files) to allow easy future modification.           |
| NFR6 | Reliability     | Submitted reports shall persist in the browser until manually cleared, preventing accidental data loss during a session. |

#### 5. External Interface Requirements

##### 5.1 User Interface

Home page with navigation to "Report an Issue" and "View Issues"

Report form with input fields and dropdowns

Issues table showing all reports with status tags

## **5.2 Hardware Interface**

Any device (PC, laptop, smartphone) capable of running a modern web browser.

## **5.3 Software Interface**

Web browser (Chrome, Firefox, Edge, Safari)

## **6. System Interactions (Use Case Summary)**

The system supports two actors: **Community Member** (Student/Indigene) and **Administrator**.

Community Member interacts with: Submit Issue Report, View Reported Issues, Track Issue Status

Administrator interacts with: View Reported Issues, Mark Issue Resolved
